

SANTOSH RAMACHAL YADAV

Application Support Engineer · AI-Assisted Application Development & Reporting

Dahisar East, Mumbai 400068 · +91 80800 80404 · santoshr8874@gmail.com

7 yrs

IT experience

5+ yrs

Insurance domain

6+

Apps in production support

6

Internal platforms delivered

PROFILE

Application Support Engineer with **7 years in IT and 5+ years supporting mission-critical insurance applications**. Owns production support for **6+ business-critical applications**, handles **backups, database and server migrations with post-migration testing**, and has delivered **six internal web platforms end to end using AI coding tools (Claude Code / LLMs)** — gathering requirements, defining the business rules and data logic, directing the AI through build and iteration, then testing, deploying and supporting each system in production. Strongest where the business problem meets the database: SQL Server, reporting and data quality.

TECHNICAL SKILLS

DATABASE & DATA

SQL Server — stored procedures, views, CRUD, SQL Agent jobs, query analysis, backup & restore · PostgreSQL

REPORTING & AUTOMATION

SSRS, Power BI, Excel automation, SharePoint via Microsoft Graph · n8n, SQL Agent jobs, Windows Task Scheduler

SUPPORT & OPERATIONS

Incident management, root cause analysis, production monitoring, SOP & SLA · Ozontel & GSM gateway, Email / SMS / WhatsApp campaigns

MIGRATION & INFRASTRUCTURE

Database & server migration, cutover planning, post-migration testing · Windows Server, IIS/iisnode (app pools), Docker, Nginx, PM2, basic networking

AI-ASSISTED DEVELOPMENT

Claude Code, LLM-based development, prompt-driven build & iteration · React, TypeScript, Node.js, Express, REST APIs, Socket.IO, Prisma

LANGUAGES & TOOLS

SQL (T-SQL), Python, PowerShell, command-line scripting, C, HTML, PHP · Git, Postman, MS Office

PROFESSIONAL EXPERIENCE

Application Support Engineer

Apr 2021 – Present

Robinhood Insurance Broker Ltd (OneInsure) — Mumbai

- **Own production support for 6+ business-critical insurance applications** (mobile, CRM and web), resolving incidents and using root cause analysis to remove recurring failures rather than re-apply workarounds.
- **Ran database and server migrations end to end** — planned and verified backups, migrated databases and applications to new servers, then carried out **post-migration testing and validation** (data integrity, application behaviour, scheduled jobs and reports) before sign-off.
- **Administer SQL Server and PostgreSQL** — stored procedures, views, CRUD, user provisioning, and daily differential / 5-day full backup cycles with restores.
- **Delivered six internal web platforms using AI coding tools** — gathered requirements from the business, defined the rules and data logic, directed the AI through build and iteration, then tested, deployed and supported each system.
- **Reduced the load internal reporting places on production databases** by specifying caching, de-duplication of concurrent requests and strict concurrency limits, after unthrottled report queries had degraded a live procedure; all reporting tools now run on read-only access by design.
- **Automated recurring reporting and operational tasks** with n8n, SQL Agent jobs, Windows Task Scheduler and Python/PowerShell, and **built SSRS reports and Power BI dashboards** — replacing manual daily runs with scheduled, monitored delivery.
- **Manage telecalling operations for 80+ users** on Ozontel and GSM gateways, including email/SMS/WhatsApp campaigns and capture of call logs, recordings and talk-time.
- **Deploy on IIS and run daily production health checks**; author monthly ISNP compliance reports and maintain SOPs for configuration, troubleshooting and recurring fixes.

QA / L2 Support Engineer

May 2019 – Apr 2021

Chuzone Technology Pvt. Ltd. — Mumbai

- Provided L2 support for customer and driver queries, diagnosing and closing issues within SLA.
- Resolved company panel defects, escalating to engineering with clear reproduction steps.

KEY PROJECTS

REPORTING & DATA QUALITY

D Reports — Centralised Insurance Reporting Dashboard

Aug 2026

React TypeScript Express SQL Server

- Replaced manually compiled sales reporting with a **self-serve dashboard for five daily reports** — activity, unproductive time, short interactions, deviation and login/logout — with drill-downs to individual employees and one-click Excel export.
- Restructured how the summaries load so every report loads, caches and fails independently**: the dashboard renders progressively instead of waiting on the slowest query, and no longer risks overloading the reporting database.

DataSanity — Data Quality, Validation & Reconciliation Portal

Jul – Aug 2026

React Express SQL Server (read-only)

- Gave the business **one place to see where policy and customer data is wrong**: field-level validation across the policy system and the CRM, ranked fix-first priorities, drill-downs to the offending records and Excel export for the correction teams.
- Made the reconciliation trustworthy** by measuring which fields genuinely agree between the two systems instead of assuming from the schema — clearing out a large volume of false mismatches caused by formatting and naming differences, so the report now surfaces real data problems only.
- Consolidated each insurance category’s rules into a single source** so validation, the UI and the reconciliation cannot drift — with **paired SQL scripts** for the DBA team to detect and correct the data.

OPERATIONS & WORKFLOW PLATFORMS

OneInsure PMS — Project Management System

Aug 2026

React Node/Express SQL Server Socket.IO

- Delivered an **in-house alternative to commercial delivery tooling** covering the full lifecycle — projects, epics, sprints, backlog, tasks, issues, tickets, test cases, UAT, releases, requirements, OKRs and timesheets — with role-based access and real-time notifications.
- Automated KPI reporting from the daily standup sheet**, read directly from a shared SharePoint workbook, so adding a day upstream needs no import and no manual consolidation. Deployed and supported on **Windows Server / IIS** with scripted deployment and diagnostics.

Reminder Intimation Portal — Policy Due Date & Payment Status

Apr – Jul 2026

Express SQL Server IIS/iisnode

- Gave renewals and collections teams **visibility of policy due dates, payment status and intimation delivery outcomes in one dashboard**, and **handed the schedule to the business** — users manage their own recipient list and send time, trigger an immediate send and see the last run’s status, with a daily summary mailer running unattended.

OneInsure Connect — Internal Communication Platform

May – Jun 2026

React Node/Express Socket.IO PostgreSQL Docker

- Built an **internal replacement for messaging blocked on the office network** — real-time 1:1 and group chat with media sharing, notifications and an employee directory — then **extended it into operations** so an issue raised in a conversation becomes a tracked item, alongside an admin panel, activity logs, projects and Kanban boards.

Prarambh SP Details Management System

May 2026

Express SQL Server IIS

- Centralised sales-partner master data** — add, update and activate/deactivate with full history — replacing a spreadsheet-driven process, and added **branch log search with export plus outbound Email/SMS/WhatsApp from the same screen**.
